bloom YELLOW BOTTLES

ROOTS

Kelp root-zone feed

AVAILABLE SIZES

300 ml · 1 L · 2.5 L · 15 L

AT A GLANCE

RATE	**1 ml/L for the first two weeks, then 0.5 ml/L**
WINDOW	**Clone through harvest**

WHAT IT IS

ROOTS is a southern bull kelp (Durvillaea potatorum) extract with humic acid and vitamin B1. It is fed from clone right through veg and flower, alongside whatever base nutrient you already run.

HOW IT WORKS

Durvillaea is a cold-water brown kelp harvested from the Southern Ocean off southern Australia, carrying alginates and trace minerals. Humic acid may increase micronutrient uptake, and thiamine (B1) rounds out the blend. It is a low-dose additive that goes on top of a full base feed, not instead of it.

DIRECTIONS

Rate	1 ml/L for the first two weeks, then 0.5 ml/L
Timing	From clone, right through veg and flower
Frequency	Weekly, at each reservoir change
Mixing	Add to the made-up nutrient solution and stir through

GUARANTEED ANALYSIS

Total nitrogen (N)	**0.0083%**	Soluble potash (K_2O)	**0.43%**
Available phosphate (P_2O_5)	**0%**		

As printed on the US product label.

DERIVED FROM

Durvillaea potatorum (seaplant extract)
Also contains: 0.075% humic acid (from leonardite); 0.054% thiamine hydrochloride (vitamin B1)
